## 1 Week 8 Assignment

### 1.1 Problem 1

In the cell below, change the value of the variable so that the cell prints True.

```
[2]: problem1_variable = 6

if problem1_variable > 5:
    print(True)
```

True

### 1.2 Problem 2

In the cell below, create an if statement so that if the variable is equal to 21 the cell prints "Blackjack!"

```
[4]: problem2_variable = 4

if problem2_variable == 21:
    print("Blackjack!")
```

### 1.3 Problem 3

In the cell below, add an if/else statement so that if the variable is a string it is printed and if it is a number it gets doubled.

```
[6]: problem3_variable = 4

if isinstance(problem3_variable, str):
    print (problem3_variable);
elif isinstance(problem3_variable, (int,float)):
    problem3_variable = problem3_variable * 2
    print (problem3_variable)
```

8

### 1.4 Problem 4

In the cell below load in the COL data and find all cities that have a wine value less than 5.

[ ]:

### 1.5 Problem 5

In the cell below, find the cities in the COL data that have a cappuccino price greater than 2.5 and average rent less than 1000.

[ ]:
